PROJECTS

Random Question Paper Generator

Aug 2022 - Nov 2022

This software enables teachers to generate various sets of question papers. Teachers can input subject, date, marks, questions, and other requirements. Subsequently, a question paper in PDF format will be generated based on the teacher's specifications.

Career Guidance System

Jan 2022 - Feb 2022

The software is developed in Python, utilizing the Tkinter library for frontend design, with MySQL serving as the backend database. It features a multiple-choice questionnaire (MCQ) designed to guide users in selecting the most suitable career options and colleges after completing their 12th grade education. The software analyzes the user's responses and provides recommendations accordingly.

Employ Payroll Management System

Oct 2021 - Dec 2021

The software is developed in Python utilizing the Tkinter library for frontend design. MySQL serves as the backend database. Additionally, an Admin panel and login system, which includes a forget password feature using an OTP system for email verification, have been implemented for administrative purposes. Through the Admin panel, CRUD (Create, Read, Update, Delete) operations can be performed on employee data.

Moreover, the software enables the calculation of salaries by incorporating various allowances such as DA (Dearness Allowance), HRA (House Rent Allowance), and generating a payslip, which is then emailed to the employee's email address.
